NATIONAL INSTITUTE OF DIETETICS AND NUTRITION

Dated: 2nd September, 2007, Budapest

Subject: Report on polyester textile

With reference to your letter from 2nd September we report the following:

The shown air hoses made of white polyester textile will be mounted for cool air inspiring fans in food industrial plants. The polyester textile is also for filtering the air.

The textile does not get in a contact with food so its use is not exceptionable with a view to food hygienic. If needed the textile should have to be cleaned from settled dirt.
